Workshops *(choose 2 out of 3)*

1. *“Hands Off, Safety On!” – Mastering Hands-Free X-Rays in Veterinary Training*

Join us for a dynamic, hands-on (yet hands-free!) workshop designed specifically for educators training the next generation of veterinary nurses. In this session, you'll learn how to safely and effectively demonstrate hands-free radiography using a model dog — a must-have skill in modern veterinary practice.

Discover techniques that not only reduce radiation exposure for students and staff but also align with current best practices and workplace safety standards. Whether you're updating your teaching approach or building confidence in radiographic positioning, this workshop equips you with practical strategies to take back to your classroom.

Empower your students to do it right — without putting their hands (or health) at risk!

2. *“Build to Teach: DIY Veterinary Nursing Models for the Classroom”*

Bring your teaching to life — literally! In this hands-on workshop, you'll learn how to create simple, cost-effective training models that will transform your practical sessions. From a paw with clip-worthy nails to a leg ready for IV catheter placement, these DIY models are designed to simulate real clinical procedures while being reusable and classroom-friendly.

Perfect for veterinary nurse educators, this session gives you the tools and tips to build your own teaching aids on a budget — and the confidence to integrate them into your lessons.

Come ready to craft, create, and take away more than just inspiration!

3. *“Speak up, stand strong: Navigating Misconduct in Veterinary Education with the Veterinary DialogueTrainer”*

How do you prepare students to respond to inappropriate behavior from clients, colleagues, or supervisors? In this interactive hands on workshop, you'll experience realistic misconduct scenarios using the Veterinary DialogueTrainer—a digital tool that helps develop communication skills and professional resilience. Together, we'll explore how to respond effectively to inappropriate behaviour, and how to make such topics discussable in a safe learning environment.

This session equips veterinary educators with practical strategies to train students in standing strong and speaking up!
